

Lemma 1. Let \succeq be a distribution-regret preference relation. Then \succeq admits a two-dimensional regret function $*: \mathcal{D} \times \mathcal{D} \to \Re$ and a regret functional V^* such that

$$X \succeq Y \iff V^* \begin{pmatrix} *(x_1, c_Y), p_1; \dots; & *(x_n, c_Y), p_n \end{pmatrix} \geqslant 0$$

$$\iff V^* \begin{pmatrix} *(y_1, c_X), q_1; \dots; & *(y_m, c_X), q_m \end{pmatrix} \leqslant 0$$

where c_X and c_Y are the certainty equivalents of X and Y respectively.

 \boldsymbol{x}

$$X \sim \delta_{c_Y} \implies V(nd V)$$

1, 7

Proposition 3. If the preference relation \succ is consistent then it satisfies distribution regret.

Position 3. If the projection $f(c_{Z}, \lambda) = 0.10$ $f(c_{Z}, \lambda) = 0.1$ Proof. $\lambda(Z) = -c_Z \qquad (x, y) = x - y.$ $f(x, \lambda(Y)) \in \mathcal{D} \mathcal{N}^{\frac{1}{2}}.$

$$f(X, \lambda(Y)) = (f(x_1, \lambda(Y)), p_1; \dots; f(x_n, \lambda(Y)), p_n)$$

$$= ((x_1, c_Y), p_1; \dots; (x_n, c_Y), p_n)$$

$$= \Psi(X, c_Y)$$

$$(4)$$

$$X \succeq Y \sim \delta_{c_Y} \quad \Longleftrightarrow \quad f(X, \lambda(Y)) \succeq f(Y, \lambda(Y)) \sim \delta_{f(c_Y, \lambda(Y))} = \delta_0$$
$$\iff \quad U(f(X, \lambda(Y))) \geqslant U(f(Y, \lambda(Y))) = U(\delta_0) = 0$$

 $V(\Psi(X, c_Y)) = U(f(X, \lambda(Y))) = U(\Psi(X, c_Y))$

$$\begin{split} X \succeq Y &\iff U \big(\Psi(X, c_Y) \big) \geqslant 0 \\ &\iff V \big(\Psi(X, c_Y) \big) \geqslant 0 \\ &\stackrel{?}{\uparrow} \succeq 0 \quad \text{and} \quad \stackrel{?}{\uparrow} \quad \text{for all } \quad \Box \end{split}$$
